TRANSPORTATION DIVISION

Dayton P. Jorgenson, Chief

ACKNOWLEDGMENTS—Many persons participated in the various activities of the 1972 Census of Transportation. Primary direction of the program was performed by Shirley Kallek, Associate Director for Economic Fields, and Melvin A. Hendry, Assistant Director for Economic Censuses.

This report was prepared in the Transportation Division under the general direction of Dayton P. Jorgenson, Chief, and Walter F. Buhl, Assistant Chief. Within this division responsibility was shared by the following individuals who contributed significantly to the entire program: Jerome Litzky, Chief, Survey Programs Branch; Donald G. Wright, Chief, Research Programs Branch; Evelyn S. Davis, publications specialist; and Helen L. Buckley, clerical supervisor. Sylvia Leaver, Data User Services Division, was responsible for the computer planning and programming. Dorcus Dupree coordinated the activities among Transportation Division, Data Preparation Division, and Computer Services Division.

Responsibility for data collection was in the Field Division under the direction of Richard C. Burt, Chief; George T. Reiner, Chief, Economic Coordination Branch; and Dwight P. Dean and Thomas J. Manning, Survey Statisticians.

The mailing, collecting of data, and processing of administrative record information were conducted by the Economic Surveys Division under the direction of Roger Bugenhagen, Chief. Assistance was provided by Samuel Schweid, Andrew Grieco, Charles Venters, Shirley Roberts, Robert Viehman, Jerry McDonald, Joel Richardson, and Sandra Katis.

Forms design was performed in the Administrative Services Division, Henry J. Husmann, Chief, Gladys Potts, Joyce Teague, Helen Hindt, and Margaret Swinton made significant contributions.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

Clerical and data keying operations were performed in the Data Preparation Division at Jeffersonville, Indiana, under the direction of O. Bryant Benton, Chief, who was assisted by Don L. Adams and Robert L. Allen.

The geographic coding procedures were developed in the Geography Division under the direction of Jacob Silver, Chief, assisted by Zigmund Decker, Terence McDowell, Silla Tomasi, Robert Hamill, David Christy, Kurt LeGait, and John Hawkins. Computer processing was directed by James R. Papal, Chief, Computer Services Division. C. Thomas DiNenna, Jesse Verdeje, and Willie E. Clark provided staff assistance.

Donald Young of the Economic Census Staff participated in the overall planning and review of the census operations.

Special acknowledgment is also due the many businesses whose cooperation has contributed to the publication of these data.

The statistics presented in this volume incorporate the commodity, special, and area report series TC72C1, TC72C3, and TC72C2.

PRODUCTION AREA DESCRIPTIONS

Production Areas represent relatively compact geographic concentrations of manufacturing activity. Twenty-five Production Areas were originally developed for this survey. Two additional areas were added in 1972 so that there are now 27. Each Production Area consists of one Standard Metropolitan Statistical Area (SMSA) or more. The SMSA's included in each Production Area are described below.

INTRODUCTION

DESCRIPTION OF THE COMMODITY TRANSPORTATION SURVEY

General

The Commodity Transportation Survey is one of the three components of the Census of Transportation, one of the Economic Censuses conducted every 5 years ending in "2" and "7". Two previous Commodity Transportation Surveys have been conducted—the first in 1963 and the second in 1967. The prime objective of this survey is to measure the transportation and geographic distribution of commodities¹ shipped by manufacturing establishments in the United States beyond the local area. The Commodity Transportation Survey, as it now exists, consists of two independent surveys: A mail summary-data survey and a main shipper survey.

Mail Survey

The first and smaller component of the survey consists of data collection by mail on a simplified 1-page summary questionnaire. About 2,000 plants are sampled which have 10 to 19 employees, and about 1,000 plants are sampled in the Printing and Publishing Industry. In this mail survey, information relating to individual shipments is not collected. The respondent replies only to questions in terms of annual-percent-of-total-value shipped. Value is used as a unit of measure rather than tons since it was felt that the small manufacturers would not have summary data available on tons shipped. Data collected for the census year as a whole include value of product and services, major product shipped, distance shipped (six categories), type of transport used (six modes), and the geographic divisions of destination. Also included is the percent shipped for export to foreign countries. The sample designs used for this survey are simple one-stage systematic random samples of plants from the respective universes. These designs are described in published reports relating to these surveys and are not discussed further in this report.

Shipper Survey

The major part of the Commodity Transportation Survey is commonly referred to as the Shipper Survey. Traffic flow data

¹ See appendix B for a description of changes between the 1967 and 1972 versions of the Transportation Commodity Code (TCC) used for shipment commodity classifications.

is gathered, processed, and disseminated relating to the volume of commodities shipped by means of transport, length of haul, size of shipment, and areas of origin and destination in tons and ton-miles. The data sources are bills of lading or other shipping documents pertaining to individual shipments from a sample of about 13,000 plants selected from the census of manufactures universe of manufacturing establishments with 20 employees or more. The sample design is multistaged, utilizing a stratified probability sampling to obtain approximately 13,000 plants at the first stage and a systematic random sample of 1.6 million shipping documents (100 to 200 from each sampled plant) at the second stage. Although the source of the shipping information pertaining to each individual shipment is the shipping document, the primary sampling unit (PSU) may be either a plant or the shipping document itself. The primary sampling unit is the plant for all but the "certainty plants," those with a probability of "1" or greater at the first stage. For certainty plants, the PSU is usually the shipping document (bill of lading) drawn systematically from a random start.

SCOPE OF THE SHIPPER SURVEY

Sample of Plants

The source list.—The universe of manufacturing plants used as the first-stage sampling frame for the Commodity Transportation Survey is the mail file of the census of manufactures as of January 1, 1972. This file consists of all manufacturing plants in the Standard Industrial Classification 20 through 39 (except as noted below) with 20 employees or more. Plants with 10 to 19 employees are surveyed independently as described above. (See Mail Survey.)

Industry universe.—The sampling frame for the Shipper Survey includes the entire industrial universe of manufacturing establishments with 20 employees or more except the following exclusions for the reasons indicated.²

SIC 19, Ordnance and
accessories Excluded for security reasons

² The CTS sample was drawn from the 1972 Census of Manufactures based upon the 1967 Standard Industrial Classification (SIC) code. The 1967 code classification was the most recent available at the time of sampling. Some realignments have been effected to the SIC as defined by the Office of Management and Budget in the Standard Industrial Classification Manual: 1972.

INTRODUCTION—Continued

SIC 2026, Fluid milk . . .
SIC 2051, Bread and
other bakery products,
except cookies
and crackers
SIC 2097, Manufactured
ice
SIC 241, Primary forest
products

} Excluded because they serve
local markets and the survey is
intended to measure nonlocal
commodity flows.

SIC 27, Printing,
publishing, and allied
industries

Excluded because they are covered by the Mail Summary-Data Survey with the 10-to-19-employees size establishments.

Plant size.—The 1963 Commodity Transportation Survey found that the primary distributions of products by plants with less than 20 employees tended to be local and that this segment of the industry generated only about 4 percent of the total nonlocal tons shipped by all manufacturing plants. However, these small plants constitute about two-thirds of the total number of establishments in the industrial universe. These findings led to the conclusion that the survey costs and reporting effort could be significantly reduced by independently sampling and surveying the 10-to-19-employees size class plants by mail on the general characteristics of their shipping patterns. Data for plants with less than 10 employees are obtained from administrative records and therefore are not included in the census of manufactures universe mail file. Consequently, they are not included in any phase of the Commodity Transportation Survey. It is also felt that the omission of plants with fewer than 10 employees allows increased emphasis on quality of data compiled from larger establishments.

Geographic scope.—Plants located in the 48 contiguous States are eligible for inclusion in the Shipper Survey. Shipments to Alaska and Hawaii from these 48 origin States are also identified as are the domestic movement of exports. (See "Shipments for export," below.)

Sample of Shipments

Local shipments.—Generally, the survey is designed to exclude "local shipments." Plants shipping 90 percent or more of their volume less than 25 miles are excluded from the survey. However, if shipments from the plant are to a "local" warehouse or other temporary storage or consolidation facility, the subsequent shipments from this facility are in scope to the survey if 10 percent or more of these shipments move over 25 miles.

Local shipments from plants that are in scope to the survey are excluded in the sampling process at the plant or subsequently by computer edit.

Method of transport.—The following modes of transport are in scope to the survey:

Rail, including combinations such as piggyback in which the major distance was by rail (railway express is included under other);

Motor carrier, including combinations in which the major distance was by motor carrier (This includes all highway transport, except by private truck.);

Private truck, trucks operated by the shipper or the customer;

Air, including air freight and air express and combinations in which the major distance was by air;

Water, including combinations in which the major distance was by water;

Other, including railway express, united parcel service, bus, freight forwarder when major means of transport (such as rail and air) is not known, messenger service etc.; and

Unknown, used when the principle type of transport is not shown on shipping documents and cannot be readily determined by the respondent.

Excluded from the survey are the following:

Own power or towed "shipments", including motorized vehicles, aircraft, or vessels which are sometimes moved from the manufacturer under their own power, and other commodities (such as prefabricated buildings) which are towed away;

Pipeline, primarily affecting shipments of petroleum products from refineries; and

Parcel post, shipments through the U.S. postal service.

Shipments for export.—Shipments for export are included in the survey with destination of the U.S. port of export. Distances and other characteristics of these shipments relate only to the domestic movement from the shipping plant to the U.S. port of export.

Classified shipments.—Shipments of manufactured commodities from an in-scope plant which would otherwise have been

included in the survey are excluded if they are classified or relate to the movement of classified materials.

Mixed shipments.—When a bill of lading or other shipping document that contains more than one commodity line is selected, the total weight is taken and ascribed to the commodity that contributed the greatest proportion to the total weight.

SAMPLE DESIGN

As mentioned earlier (see Shipper Survey), a two-stage probability sample design was used. The first stage involved the drawing of a probability sample of about 13,000 plants from the universe. The second involved the selection of a probability sample of about 100 to 200 bills of lading or other shipping documents on file at each of the sampled plants.

The term "probability sample," as used here, means that the chance for selecting each document from the millions of such documents in the universe is known and is not equal to zero. The information from a probability sample can be expanded to approximate the total that would have been obtained by a complete count, and the sampling variability can be estimated from the sample itself.

The sample design is rather complex.³ In general, the first stage involved the classification of manufacturing plants into 85 shipper classes based upon the plant's Standard Industrial Classification (SIC). These classes were then regrouped into nine "tonnage divisions," based on the total tons shipped by each shipper class in the 1963 and 1967 surveys. Each manufacturing plant also was identified by its location and classified into two geographic strata: (1) Located in a "selected industrial State" or (2) located in any other State. The selected industrial States are those in which the major production areas are located and include the following:

California	Minnesota
Colorado	Missouri
Connecticut	New Jersey
Delaware	New York
Georgia	Ohio
Indiana	Pennsylvania
Illinois	Rhode Island
Maryland	Texas
Massachusetts	Washington
Michigan	Wisconsin

³ A detailed technical description may be obtained from the Transportation Division, Bureau of the Census, Washington, D.C. 20233.

Within each of the nine tonnage divisions and two geographic strata, the probability of selecting any given plant in the universe was proportionate to the "intercity tonnage rating" of the plant. The rating for each plant was based on the intercity tons shipped by the average plant of the same shipper class and employee size group in the 1963 and 1967 surveys.

With respect to the allocation of plants within the sample, it was decided that the relative degree of precision and detail should be somewhat greater for the shipper classes in the large tonnage divisions than for those in the small tonnage divisions. An average of 205 plants per shipper class was obtained in each of the 4 largest tonnage divisions, 176 in the 5th division, and an average of 132 per shipper class in the 4 smallest tonnage divisions. It also was decided that greater precision was needed for data on traffic flows from production areas than from the balance of the country. The probability of selecting a specific plant located in a selected industrial State was set at 1.5 times the probability of selecting an otherwise comparable plant in any other State.

After selecting the plants, the next stage involved the selection of a probability sample of bills of lading or other shipping papers at the company headquarters or individual plants. Several alternative standard plans were used, depending largely on the filing system used by the company. For example, in files organized by serial number, the procedure involved drawing every "nth" record, after taking a random-number start. In large chronological files, a two-stage design was used—a sample of dates and a sample of shipping papers within those dates. Special designs were made for recordkeeping situations that could not be sampled readily by one of the standard plans.

METHODS FOR ESTIMATING

The basic source document for obtaining size of shipment (in pounds) and origin/destination information is the sampled individual shipping paper—bill of lading, sales invoice, summary shipping record, etc.

Estimates of Tons

Estimates of total tons are shown in the first column of tables involving tons shipped. These figures represent the approximate total that would have been obtained by a complete enumeration of all shipments. These estimates are subject to sampling variability, response variations, and other non-sampling errors. The estimates of tons were made by multiplying the actual weight shown on the record for each shipment by the reciprocal of the sampling fraction for that ship-

ment,⁴ aggregating the expanded value, and converting to tons. For example, if a manufacturing establishment was selected at the rate of 1 in 5, and shipments within that plant were drawn at the rate of 1 in 20, the weight in pounds of that shipment would be multiplied by 100 (that is, 5 times 20) and divided by 2,000 for purposes of estimating total tons shipped.

Estimates of Ton-Miles

Estimates of total ton-miles are shown in the first column of tables involving ton-miles. These figures are the product of weight times distance. For example, a 10-ton shipment that moved between places that were 1,000 miles apart is equivalent to a 50-ton shipment that moved 200 miles. Both represent 10,000 ton-miles, although they differ in terms of both weight and distance.

Estimates of Distance

The distance component is calculated by a computer program known as PICADAD.⁵ Distance is the straight-line miles between the plant as origin and the destination shown on the shipping paper, without allowance for circuitry in actual route used by the carrier. The actual route-mile distance is somewhat longer. On the average, railroad "short-line" and highway "direct-route" distances exceed the calculated straight-line miles by about 24 percent and 21 percent, respectively.

Estimates of Size

Observations based on summary reports and other types of records generally show weights that are aggregates of several shipments. While both classes of records were used for estimating total tons, the latter was excluded from the analyses by size of shipment. Therefore, tabulations showing the distribution of shipments by weight class were estimated from shipment data that were based on bills of lading and sales invoices.

The size of shipment in this report is the weight shown on the bill of lading or sales invoice, and is not necessarily the weight actually shipped in one freight car, truck, or other vehicle. Doubtless many of the smaller shipments shown in this survey were consolidated by the shipper into carload or truck lots, while some large shipments were moved in more than one freight car or truck.

⁴ Adjusted for nonresponse. The response rate for the survey was above 99 percent.

⁵ A program developed by the Bureau of the Census specifically for processing transportation data.

RELIABILITY OF DATA

Estimates of total tons (and ton-miles) and percentage distributions have been presented for each commodity or commodity class, provided (1) the estimate contained shipments from at least three companies and five plants, (2) the estimate did not disclose the shipments of an individual company or plant, and (3) one relative standard error did not exceed 50 percent of the estimate with which it was associated.

SAMPLING VARIABILITY

General Description

The statistics presented in this book are estimates from a sample. The particular sample that was selected is one of the large number of all possible samples of the same size that could have been selected using the same sample design. Estimates derived from the different samples would differ from each other and from the results of a complete census using the same procedures. This variation among the possible estimates is called sampling variability. For example, hypothesize that shipments of Transportation Commodity Code (TCC) 201 (Meat; fresh, chilled, or frozen) were estimated to have been 26,800,000 tons during 1972 and the "sampling variability" was estimated to be about 10.6 percent. In that instance, the sampling variability was expressed in relative terms which is technically called the relative standard error. Variability may also be expressed in absolute terms (such as tons), which in this illustration was 2,840,800 tons or the equivalent of 10.6 percent of 26,800,000 tons. When expressed in absolute (rather than percentage) terms, the variability is known technically as one standard error.⁶

Interpretation of Sampling Variability

General guide.—The following general guide is given for the interpretation of sampling variability: Had all elements of the universe been canvassed, the value for a given item would be included in the range—

From 1.0 standard error below to 1.0 standard error above the estimate obtained for about two-thirds of all possible samples;

⁶ In fact, from a computational standpoint, a standard error is estimated from the observed values, and the relative error is the standard error divided by the estimated total to which it applies.

From 1.6 standard errors below to 1.6 standard errors above the estimate obtained for about 90 percent of all possible samples;

From 2.0 standard errors below to 2.0 standard errors above the estimate obtained for about 95 percent of all possible samples; and

From 3.0 standard errors below to 3.0 standard errors above the estimate obtained, almost always.

These values may be interpreted, therefore, as defining approximate confidences that the estimate shown would not differ by more than 1.0, 1.6, 2.0, or 3.0 of its standard errors, respectively, from the result for a complete census.

Illustration (variability).—For example, hypothesized total shipments of TCC 201 (as noted above) were estimated to have been 26.80 million tons, plus or minus 2.84 million tons. Using the probability guide above, those figures may be interpreted as follows:

1. The chances are about 2 out of 3 that a complete enumeration would have shown between 23.96 and 29.64 million tons (that is, plus or minus 1.0 standard error);
2. The chances are about 9 out of 10 that a complete enumeration would have shown between 22.26 and 31.34 tons (that is, plus or minus 1.6 times the standard error); and
3. There is almost no chance that a complete enumeration would have shown less than 18.28 or more than 35.32 tons (that is, plus or minus 3 times the standard error).

Illustration (relative variability).—The interpretation of relative variability corresponds to the interpretation for absolutes. Again using the same illustration, the relative variability was estimated to be 10.6 percent. The chances are about 2 out of 3 that the estimate is not more than 10.6 percent above or below the figure that would have been obtained by a complete enumeration. The chances are about 9 out of 10 that the estimate is within 17 percent of the actual (that is, plus or minus 1.6 times the relative standard error), and almost no chance that the estimate is more than 31.8 percent above or below the total that would have been obtained from a complete enumeration.

Standard error of a percent.—The standard error of a percent in published percent distributions that are based upon an estimate from the survey cannot be determined directly from

the relative standard errors published with the data tables. In general, the order of magnitude of the standard error of a percent depends upon the size of the percent and the size of the base from which it was derived.

Differences between two estimates.—Sometimes the question arises as to what is the sampling variability of the difference between two items. For example, say for illustration purposes, the total tonnage of TCC 263 (Paperboard, pulpboard, and fiberboard) is shown as 20.6 million tons as compared with 14.4 million tons of TCC 265 (Containers and boxes, paperboard). The estimates indicate that TCC 263 tonnage is approximately 6.2 million tons greater than the volume of TCC 265.

Was the tonnage of TCC 263 actually larger than TCC 265? What is the variability of that 6.2 million ton difference? A rough, conservative estimate can be made readily on the basis of the standard errors shown for the two items. For example, say the relative errors are 11.4 percent for TCC 263 and 9.8 percent for TCC 265. Translating those into absolutes⁷, the standard errors are 2.3 million and 1.4 million tons for TCC 263 and TCC 265, respectively. To obtain a rough estimate of the standard error of the difference, multiply the larger of the two standard errors by a factor of 1.4⁸ which in this instance is 1.4 times 2.3 million tons or about 3.2 million tons. The chances are about 2 out of 3 that the difference attributable to sampling would not be more than 3.2 million tons and about 9 out of 10 that it would not be greater than 5.1 million tons (that is, 1.6 times 3.2 million tons).

However, at the highest level of confidence (3 standard errors or near certainty), the difference attributable to sampling may be as high as 9.6 million tons (3 times 3.2 million tons) and, since the difference between statistics was 6.2 million tons, we cannot say with absolute confidence that a difference exists. As mentioned above, this is a rough but conservative estimate of variability of the difference between two items.

Ton-Miles

The sampling variability shown in this report relates to estimates of tons shipped. No variances were estimated for ton-miles. The sampling variability for ton-miles for any given item probably is similar to, but somewhat higher than, the sampling variability for tons on the same item.

⁷ 11.4 percent of 20,597 and 9.8 percent of 14,410.

⁸ The standard error of a difference is actually

$$\sigma_{A-B} = \sqrt{\sigma^2_A + \sigma^2_B - 2\sigma_{AB}}$$

where

σ^2_A is the variance of A, σ^2_B is the variance of B, and

σ_{AB} is the covariance of A and B.

Non-Sampling Errors

In addition to sampling variability, the data are subject to "response errors" at the second stage of sampling that may have arisen from misinterpretation of questions, failure to find and sample some files, or other similar sources of error. This type of error probably is generally minor in this survey; however no statistical measure of the impact of these errors has been made. For certain industries (specifically, refined petroleum products), this error may be substantial due to ambiguities concerning the exclusion of local shipments and pipeline ship-

ments or the greater use of a date sample procedure which is believed to be subject to greater error than other methods employed. The sampling procedures at each plant were relatively clear, and the precise facts were transcribed directly from individual shipping documents by company personnel in most instances. In the processing of data, careful efforts were made at each step to reduce the effects of errors. Errors occurred through failure to obtain complete and consistent information, incorrect recording of information on the schedules, incorrect transcriptions, and the like. Computer edits and review were used to identify and correct large errors.

Note: See table 1 for estimates of relative sampling variability for tons originated by commodity.

— Represents or rounds to zero.

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

TABLE 2. Percent Distribution of Commodities, by Distance of Shipment: 1972

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

- Represents or rounds to zero. (X) Not applicable.

TABLE 3. Percent Distribution of Commodities, by Weight of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by weight of shipment							
			Total	Under 1,000 pounds	1,000 to 9,999 pounds	10,000 to 29,999 pounds	30,000 to 59,999 pounds	60,000 to 89,999 pounds	90,000 pounds and over	Sampling variability

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 contiguous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Includes only shipments represented by bills of lading and sales invoices. Summary records which did not show individual weights of shipments are not included.

- Represents or rounds to zero. (X) Not applicable.

Note: See table 1 for estimates of relative sampling variability for tons originated by commodity.

— Represents or rounds to zero.

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

TABLE 2. Percent Distribution of Commodities, by Distance of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by distance of shipment								
			All distances	Under 100 miles	100 to 199 miles	200 to 299 miles	300 to 499 miles	500 to 999 miles	1,000 to 1,499 miles	1,500 miles and over	Sam- pling var- iability

-----	ALL OTHER MISCELLANEOUS.	3,335	100.0	5.8	7.3	5.3	8.2	31.1	13.6	29.1

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 contiguous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719 and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Distances of shipments to foreign destination are calculated only to the U.S. port of export.

- Represents or rounds to zero. (X) Not applicable.

TABLE 3. Percent Distribution of Commodities, by Weight of Shipment: 1972

TCC code	Commodity	A. Tons of Shipments		Percent distribution by weight of shipment						
		Number (thousands of tons)	Total	Under 1,000 pounds	1,000 to 9,999 pounds	10,000 to 29,999 pounds	30,000 to 59,999 pounds	60,000 to 89,999 pounds	90,000 pounds and over	Sampling variability

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Includes only shipments represented by bills of lading and sales invoices. Summary records which did not show individual weights of shipments are not included.

- Represents or rounds to zero. (X) Not applicable.

Production Area 1—Continued

Summary of Shipments Originating in This Production Area: 1972 and 1967

Footnotes

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export. ⁵ Includes only intercity shipments within the production area (those that originated in one city in this area and terminated in another city in this area).

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

TABLE 2. Percent Distribution of Commodities, by Distance of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by distance of shipment

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

- Represents or rounds to zero. (X) Not applicable.

TABLE 3. Percent Distribution of Commodities, by Weight of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by weight of shipment							Sampling variability
			Total	Under 1,000 pounds	1,000 to 9,999 pounds	10,000 to 29,999 pounds	30,000 to 59,999 pounds	60,000 to 89,999 pounds	90,000 pounds and over

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Includes only shipments represented by bills of lading and sales invoices. Summary records which did not show individual weights of shipments are not included.

- Represents or rounds to zero. (X) Not applicable.

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Two production areas were added in 1972 due to increased industrial activity. These are production area 26, Indianapolis, Muncie, and Anderson and production area 27, Kansas City, St. Joseph, and Topeka.

- Represents or rounds to zero. (X) Not applicable.

Production Area 2—Continued

Summary of Shipments Originating in This Production Area: 1972 and 1967

Footnotes

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export. ⁵ Includes only intercity shipments within the production area (those that originated in one city in this area and terminated in another city in this area).

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

TABLE 2. Percent Distribution of Commodities, by Distance of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by distance of shipment								
			All distances	Under 100 miles	100 to 199 miles	200 to 299 miles	300 to 499 miles	500 to 999 miles	1,000 to 1,499 miles	1,500 miles and over	Sampling variability

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

- Represents or rounds to zero. (X) Not applicable.

TABLE 3. Percent Distribution of Commodities, by Weight of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by weight of shipment							Sampling variability
			Total	Under 1,000 pounds	1,000 to 9,999 pounds	10,000 to 29,999 pounds	30,000 to 59,999 pounds	60,000 to 89,999 pounds	90,000 pounds and over

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 contiguous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Includes only shipments represented by bills of lading and sales invoices. Summary records which did not show individual weights of shipments are not included.

- Represents or rounds to zero. (X) Not applicable.

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Two production areas were added in 1972 due to increased industrial activity. These are production area 26, Indianapolis, Muncie, and Anderson and production area 27, Kansas City, St. Joseph, and Topeka.

Note: See table 1 for estimates of relative sampling variability for tons originated by commodity.

— Represents or rounds to zero.

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

TABLE 1. Percent Distribution of Commodities Shipped to Geographic Divisions,
by Means of Transport: 1972—Continued

B. Ton-Miles of Shipments

TCC code	Division of destination and commodity	Number (millions of ton-miles)	Percent distribution by means of transport							
			All means of transport	Rail	Motor carrier	Private truck	Air	Water	Other	Unknown
	PACIFIC DIVISION--CONTINUED									
399	MISCELLANEOUS MANUFACTURED PRODUCTS.	16	100.0	45.4	51.2	-	2.7	-	.9	-
3999	MANUFACTURED PRODUCTS, NEC	16	100.0	46.4	51.0	-	2.7	-	.1	-
--	ALL OTHER MISCELLANEOUS.	324	100.0	66.9	24.4	.2	.9	6.7	.3	.9
---	ALL OTHER MISCELLANEOUS.	599	100.0	57.3	32.9	.3	1.4	7.4	.5	.6
----	ALL OTHER MISCELLANEOUS.	1,377	100.0	54.5	31.7	.5	.7	12.2	.4	.4
-----	ALL OTHER MISCELLANEOUS.	1,441	100.0	52.3	35.3	.5	.8	10.8	.3	.4

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookie and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 contiguous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

TABLE 2. Percent Distribution of Commodities, by Distance of Shipment: 1972

TCC code	Commodity	Number (thousands of tons)	Percent distribution by distance of shipment								
			All distances	Under 100 miles	100 to 199 miles	200 to 299 miles	300 to 499 miles	500 to 999 miles	1,000 to 1,499 miles	1,500 miles and over	Sampling variability

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 281B1 and 281B2; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

- Represents or rounds to zero. (X) Not applicable.

TABLE 3. Percent Distribution of Commodities, by Weight of Shipment: 1972

TCC code	Commodity	A. Tons of Shipments								
		Number (thousands of tons)	Total	Under 1,000 pounds	1,000 to 9,999 pounds	10,000 to 29,999 pounds	30,000 to 59,999 pounds	60,000 to 89,999 pounds	90,000 pounds and over	Sampling variability

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Includes only shipments represented by bills of lading and sales invoices. Summary records which did not show individual weights of shipments are not included.

- Represents or rounds to zero. (X) Not applicable.

Note: See table 1 for estimates of relative sampling variability for tons originated by commodity.

— Represents or rounds to zero.

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

CHART 1.

NEW YORK | *Percent Distribution of Shipments, by Characteristic: 1972 (Based on thousands of tons)*

Note: See table 1 for estimates of sampling variability.

Shipments, by Geographic Division of Destination: 1972

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

TABLE 2. Percent Distribution of Commodities, by Distance of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by distance of shipment								Sampling variability
			All distances	Under 100 miles	100 to 199 miles	200 to 299 miles	300 to 499 miles	500 to 999 miles	1,000 to 1,499 miles	1,500 miles and over

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1987 survey. However, for the 1972 survey, SIC 2052, cookie and cracker, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 contiguous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34289; 34888 and 34898; and 37428 and 37428.

Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

- Represents or rounds to zero. (X) Not applicable.

TABLE 3. Percent Distribution of Commodities, by Weight of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by weight of shipment							Sampling variability
			Total	Under 1,000 pounds	1,000 to 9,999 pounds	10,000 to 29,999 pounds	30,000 to 59,999 pounds	60,000 to 89,999 pounds	90,000 pounds and over

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included, however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Includes only shipments represented by bills of lading and sales invoices. Summary records which did not show individual weights of shipments are not included.

- Represents or rounds to zero. (X) Not applicable.

Note: See table 1 for estimates of relative sampling variability for tons originated by commodity.

— Represents or rounds to zero. r Revised from 1967 published data. (*) Revised 1967 data not available.

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

CHART 1.

PENNSYLVANIA | *Percent Distribution of Shipments, by Characteristic: 1972 (Based on thousands of tons)*

Note: See table 1 for estimates of sampling variability.

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

TABLE 2. Percent Distribution of Commodities, by Distance of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by distance of shipment								
			All distances	Under 100 miles	100 to 199 miles	200 to 299 miles	300 to 499 miles	500 to 999 miles	1,000 to 1,499 miles	1,500 miles and over	Sampling variability

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

- Represents or rounds to zero. (X) Not applicable.

TABLE 3. Percent Distribution of Commodities, by Weight of Shipment: 1972

TCC code	Commodity	A. Tons of Shipments		Percent distribution by weight of shipment						
		Number (thousands of tons)	Total	Percent distribution by weight of shipment						Sam- pling vari- ability
				Under 1,000 pounds	1,000 to 9,999 pounds	10,000 to 29,999 pounds	30,000 to 59,999 pounds	60,000 to 89,999 pounds	90,000 pounds and over

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 contiguous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Includes only shipments represented by bills of lading and sales invoices. Summary records which did not show individual weights of shipments are not included.

- Represents or rounds to zero. (X) Not applicable.

Production Area 3—Continued

Summary of Shipments Originating in This Production Area: 1972 and 1967

Footnotes

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export. ⁵ Includes only intercity shipments within the production area (those that originated in one city in this area and terminated in another city in this area).

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey. Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

TABLE 2. Percent Distribution of Commodities, by Distance of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by distance of shipment

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

- Represents or rounds to zero. (X) Not applicable.

TABLE 3. Percent Distribution of Commodities, by Weight of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by weight of shipment							
			Total	Under 1,000 pounds	1,000 to 9,999 pounds	10,000 to 29,999 pounds	30,000 to 59,999 pounds	60,000 to 89,999 pounds	90,000 pounds and over	Sampling variability

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 289998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Includes only shipments represented by bills of lading and sales invoices. Summary records which did not show individual weights of shipments are not included.

- Represents or rounds to zero. (X) Not applicable.

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries) parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Two production areas were added in 1972 due to increased industrial activity. These are production area 26, Indianapolis, Muncie, and Anderson and production area 27, Kansas City, St. Joseph, and Topeka.

- Represents or rounds to zero. (X) Not applicable.

Production Area 4—Continued

Summary of Shipments Originating in This Production Area: 1972 and 1967

Footnotes

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export. ⁵ Includes only intercity shipments within the production area (those that originated in one city in this area and terminated in another city in this area).

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

TABLE 2. Percent Distribution of Commodities, by Distance of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by distance of shipment								
			All distances	Under 100 miles	100 to 199 miles	200 to 299 miles	300 to 499 miles	500 to 999 miles	1,000 to 1,499 miles	1,500 miles and over	Sampling variability

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

- Represents or rounds to zero. (X) Not applicable.

TABLE 3. Percent Distribution of Commodities, by Weight of Shipment: 1972

TCC code	Commodity	Number (thousands of tons)	Percent distribution by weight of shipment						
			Total	Under 1,000 pounds	1,000 to 9,999 pounds	10,000 to 29,999 pounds	30,000 to 59,999 pounds	60,000 to 89,999 pounds	90,000 pounds and over

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Includes only shipments represented by bills of lading and sales invoices. Summary records which did not show individual weights of shipments are not included.

- Represents or rounds to zero. (X) Not applicable.

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries) parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Two production areas were added in 1972 due to increased industrial activity. These are production area 26, Indianapolis, Muncie, and Anderson and production area 27, Kansas City, St. Joseph, and Topeka.

- Represents or rounds to zero. (X) Not applicable.

Production Area 5—Continued

Summary of Shipments Originating in This Production Area: 1972 and 1967

Footnotes

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export. ⁵ Includes only intercity shipments within the production area (those that originated in one city in this area and terminated in another city in this area).

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero.

(X) Not applicable.

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Distances of shipments to foreign destination are calculated only to the U.S. port of export.

- Represents or rounds to zero. (X) Not applicable.

TABLE 3. Percent Distribution of Commodities, by Weight of Shipment: 1972

TCC code	Commodity	Number (thousands of tons)	Percent distribution by weight of shipment							
			Total	Under 1,000 pounds	1,000 to 9,999 pounds	10,000 to 29,999 pounds	30,000 to 59,999 pounds	60,000 to 89,999 pounds	90,000 pounds and over	Sampling variability

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719 and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Includes only shipments represented by bills of lading and sales invoices. Summary records which did not show individual weights of shipments are not included.

- Represents or rounds to zero. (X) Not applicable.

TABLE 4. Percent Distribution of Commodities, by Production Area of Destination: 1972

A. Tons of Shipments											
TCC code	Commodity	Number (thousands of tons)	Percent distribution by production area of destination								
			Total	1 (BOST)	2 (HART)	3 (NYNY)	4 (N.NJ)	5 (PHIL)	6 (BALT)	7 (ALLN)	8 (HARR)

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries) parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Two production areas were added in 1972 due to increased industrial activity. These are production area 26, Indianapolis, Muncie, and Anderson and production area 27, Kansas City, St. Joseph, and Topeka.

- Represents or rounds to zero. (X) Not applicable.

Production Area 7—Continued

Summary of Shipments Originating in This Production Area: 1972 and 1967

Footnotes

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export. ⁵ Includes only intercity shipments within the production area (those that originated in one city in this area and terminated in another city in this area).

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 contiguous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

-----	ALL OTHER MISCELLANEOUS	1,819	100.0	1.5	7.9	7.5	40.2	22.2	21.0

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Includes only shipments represented by bills of lading and sales invoices. Summary records which did not show individual weights of shipments are not included.

- Represents or rounds to zero. (X) Not applicable.

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries) parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Two production areas were added in 1972 due to increased industrial activity. These are production area 26, Indianapolis, Muncie, and Anderson and production area 27, Kansas City, St. Joseph, and Topeka.

- Represents or rounds to zero. (X) Not applicable.

Production Area 8—Continued

Summary of Shipments Originating in This Production Area: 1972 and 1967

Footnotes

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export. ⁵ Includes only intercity shipments within the production area (those that originated in one city in this area and terminated in another city in this area).

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

Note: Detail may not add to total due to rounding.
SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 contiguous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Two production areas were added in 1972 due to increased industrial activity. These are production area 26, Indianapolis, Muncie, and Anderson and production area 27, Kansas City, St. Joseph, and Topeka.

- Represents or rounds to zero. (X) Not applicable.

Production Area 9—Continued

Summary of Shipments Originating in This Production Area: 1972 and 1967

Footnotes

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export. ⁵ Includes only intercity shipments within the production area (those that originated in one city in this area and terminated in another city in this area).

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 contiguous States and the District of Columbia are included; however no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Two production areas were added in 1972 due to increased industrial activity. These are production area 26, Indianapolis, Muncie, and Anderson and production area 27, Kansas City, St. Joseph, and Topeka.

Production Area 10—Continued

Summary of Shipments Originating in This Production Area: 1972 and 1967

Footnotes

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export. ⁵ Includes only intercity shipments within the production area (those that originated in one city in this area and terminated in another city in this area).

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 contiguous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

TABLE 2. Percent Distribution of Commodities, by Distance of Shipment: 1972

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. Distances of shipments to foreign destinations are calculated only to the U.S. port of export.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Includes only shipments represented by bills of lading and sales invoices. Summary records which did not show individual weights of shipments are not included.

- Represents or rounds to zero. (X) Not applicable.

Notes: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 contiguous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

Two production areas were added in 1972 due to increased industrial activity. These are production area 26, Indianapolis, Muncie, and Anderson and production area 27, Kansas City, St. Joseph, and Topeka.

- Represents or rounds to zero. (X) Not applicable.

Production Area 12—Continued

Summary of Shipments Originating in This Production Area: 1972 and 1967

Footnotes

¹ Ton-miles are the product of weight times distance on a straight-line distance basis. ² Average length of haul is based on straight-line miles from plant to customer or redistribution point, weighted by tonnage shipped (i.e., ton-miles divided by tons). Rail short-line and highway direct-route distances average about 24 and 21 percent, respectively, longer than straight-line distances. ³ Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii. ⁴ Distances of shipments to foreign destinations are calculated only to the U.S. port of export. ⁵ Includes only intercity shipments within the production area (those that originated in one city in this area and terminated in another city in this area).

Note: Detail may not add to total due to rounding.

SIC 205 was out of scope to the 1967 survey. However, for the 1972 survey, SIC 2052, cookies and crackers, was included while SIC 2051 remained out of scope to the survey.

Shipments excluded from the survey are those moving by pipeline (primarily petroleum products from refineries), parcel post shipments, and commodities moved by own power (motorized vehicles, aircraft, etc.) or towed (prefabricated buildings, etc.). Local shipments (commodities shipped less than 25 miles from the plant) and shipments within the same city are also excluded. Shipments to Alaska and Hawaii from the 48 conterminous States and the District of Columbia are included; however, no data were obtained for shipments originating in Alaska and Hawaii.

For the 1972 published data, the following TCC codes have been combined: 28181 and 28182; 28999 and 28998; 30619 and 30618; 30719, and 30721 to 30729; 34299 and 34298; 34999 and 34998; and 37429 and 37428.

- Represents or rounds to zero. (X) Not applicable.

TABLE 2. Percent Distribution of Commodities, by Distance of Shipment: 1972

A. Tons of Shipments

TCC code	Commodity	Number (thousands of tons)	Percent distribution by distance of shipment								Sampling variability
			All distances	Under 100 miles	100 to 199 miles	200 to 299 miles	300 to 499 miles	500 to 999 miles	1,000 to 1,499 miles	1,500 miles and over	
	TOTAL	25,260	100.0	29.1	16.6	16.7	20.5	10.2	4.6	2.6	5
